CURRICULUM VITAE — B. ANIL KUMAR

CONTACT INFORMATION

Name: B. Anil Kumar
Location: Yanam, Pondicherry
Phone: 6302200431
Email: ballaanilkumar369@gmail.com
LinkedIn: linkedin.com/in/anil3423
GitHub: github.com/Anil-CAI
Portfolio: anilresume.netlify.app

PROFILE

Artificial Intelligence undergraduate student focused on Robotics, VR/XR Systems, and Teleoperation Engineering. Interested in immersive robotic interaction systems, real-time communication architectures, and Human-Robot Interaction technologies.

Experienced in developing VR-based robotic control systems using Unity, Python, and networking technologies. Passionate about future robotics interfaces, telepresence systems, and immersive control environments.

EDUCATION

KIET (JNTUK)

Bachelor of Technology — Computer Science Engineering (Artificial Intelligence)

Expected Graduation: 2027 | CGPA: 7.8

TECHNICAL SKILLS

Programming & Development:

Python, Unity Development, Unreal Engine 5

VR/XR Technologies:

Meta Quest 3 Development, VR Interaction Systems, Immersive Environment Design, XR Interface Development

Robotics & Networking:

Teleoperation Systems, Real-time Communication, WebRTC, Robotics Software Integration, Networking Systems

Additional Tools:

Blender, AI Integration, Web-based XR Systems

EXPERIENCE

KIET Robotics Lab

Robotics Lab Contributor | Duration: 1 Year

• Participated in robotics-related experimentation and development

• Assisted in creating robotics software systems

• Contributed to development of the robotics lab web platform

• Helped build AI assistant-related systems for lab usage

• Worked collaboratively on technical implementation tasks

PROJECTS

VR Teleoperation System for Unitree Go2

Developed a real-time VR teleoperation platform for controlling the Unitree Go2 robot dog using Meta Quest 3.

Project Highlights:

• Live robot POV streaming into VR

• VR controller-based locomotion system

• Steering-based directional movement interface

• Forward/backward robotic control system

• Wireless low-latency communication architecture

• Real-time telepresence environment

Technical Architecture:

• Unity VR application running on Meta Quest 3

• Python server handling robot communication

• WebRTC-based real-time networking system

• Local WiFi communication setup

• Integrated live robotic camera streaming

Technologies Used: Unity, Python, WebRTC, VR/XR, Networking, Unitree SDK

AR/VR Drawing Environment

Created an immersive XR drawing environment where users can interactively draw inside a virtual world.

Features:

• Full VR immersive interaction

• Spatial 3D drawing system

• Web-accessible XR platform

• Persistent save functionality

• Interactive virtual canvas system

Technologies Used: Unity, VR/XR, Spatial Interaction Systems

CAREER OBJECTIVES

Seeking opportunities in:

• Robotics Software Engineering

• XR/VR Development

• Teleoperation Systems

• Human-Robot Interaction

• Immersive Robotics Interfaces

Interested in contributing to robotics and telepresence systems in innovative startups and research-driven engineering environments, especially in **Japan-based robotics companies**.
